ABSTRACT

Elections are one of the important topics in the study of global democracy. This study aims to analyze scientific literature in the Journal of Electoral Studies as one of the highly reputable international journals from 2016 to August 2021. The data was analyzed using a bibliometric approach and visualization using VOSViewer and R Studio. This study took 618 articles from various international authors which showed that the electoral studies journal was consistently published with the most authors coming from the United States even though the origin of the university came from the Universiteit van Amsterdam Netherlands. Voting behavior and elections are two important keywords that often appear, indicating that these two issues are most often discussed by authors because they are considered to contribute greatly to electoral studies. These two keywords will also continue to be relevant in future election studies both in electoral studies journals and in other reputable journals because the development of the issue is very dynamic.

Keywords: Bibliometric analysis, mapping study, Electoral Studies Journal, VOSviewer, R Studio

ABSTRAK

Pemilu merupakan salah satu topik penting dalam kajian demokrasi global. Penelitian ini bertujuan melakukan analisis literatur ilmiah di Jurnal electoral Studies sebagai salah satu jurnal internasional bereputasi tinggi dari terbitan 2016 sampai dengan Agustus 2021. Data dianalisa dengan menggunakan pendekatan bibliometrik dan visualisasi menggunakan VOSViewer dan R Studio. Studi ini mengambil 618 artikel dari berbagai penulis internasional yang menunjukkan bahwa jurnal electoral studies konsisten terbit dengan penulis terbanyak berasal dari amerika serikat meskipun untuk asal universitas berasal dari Universiteit van Amsterdam Belanda. Voting behavior dan elections adalah 2 kata kunci penting yang sering muncul yang menandakan bahwa kedua isu tersebut paling sering dibahas oleh para penulis karena dianggap sangat memberikan kontribusi dalam kajian kepemiluan. Kedua kata kunci tersebut juga akan terus relevan dalam kajian-kajian pemilu selanjutnya baik di jurnal electoral studies maupun di jurnal-jurnal bereputasi lainnya karena perkembangan isunya yang sangat dinamis.

Kata Kunci: Analisis bibliometric, peta kajian, electoral studies, VOSViewer, R Studio

INTRODUCTION

Electoral Studies is one of the most reputable international journals that has been published for more than 39 years since 1982 with an Impact factor of 2,070 and 2.4 Cited Score. The main focus of the study is the election phenomenon which summarizes events with this topic in various parts of the world. In addition, the Electoral Studies journal

provides discussion space and publications on various topics derived from election studies such as voter participation, voting behavior, campaigns, political parties, electoral systems, and others. This Journal is known to have a substantial knowledge contribution because it can elaborate on empirical data-based phenomena through solid theoretical aspects. In general, this Journal describes the ongoing study of the development of democracy with its very complex dynamics.

Election studies are exciting because they relate to the implementation of democracy at the global level. Not only limited to journals published by Electoral Studies but also in other highly reputable journals. This is evidence that the study of electoral matters has attracted the attention of scholars and is considered to have an essential contribution to science, especially regarding democratic leadership. The electoral topics are extensive, for example from the use of social media/digital activism by candidates in gaining vote support (Shmargad & Sanchez, 2020; Lobera & Portos, 2021; Velasquez & Quenette, 2018; Tang & Lee, 2018; Haleva-Amir, 2021; Reilly & Stewart, 2021; Kovic et al., 2017) and as a means for voters to express sentiment or judgment on candidates (Doroshenko et al., 2019).

Not only that, but the electoral topic is also related to voter turnout (Söderlund, 2017) and voting behavior (Weber & Franklin, 2018), identity politics (Mietzner, 2020), Linkages politics (Savirani & Aspinall, 2017), Electoral Manipulation Candidate (Szakonyi, 2021), the influence of foreign policy in elections (Meibauer, 2021), the impact of partisan groups in elections (Levin, 2019), racism in elections (Andrew Janusz, 2018), Electoral Violence (Harish & Toha, 2019) electoral reform through political parties (Schröder & Manow, 2020), public opinion on election integrity (Coffé, 2017) and performance and evaluation of incumbents (Aruoba et al., 2019)

Why are electoral studies critical? They map the world's electoral process with complex phenomena. With that, the extent of the institutionalization of democracy in several countries will be known with various problems and solutions. The topics published in electoral studies journals help us understand the phenomenon of female voters' tendencies (Woo Chang Kang et al., 2021), populism (Haugsgjerd, 2019; Cassell, 2021); for example, in Denmark (Thesen, 2018), Great Britain (Magni, 2017), Dutch (van Heerden & van der Brug, 2017; Rooduijn et al., 2016), in the European parliament elections (Zulianello & Larsen, 2021; Schwörer, 2021) and the leadership of political parties (Cozza & Somer-Topcu, 2021). Furthermore, there is also political racism in the 2014 and 2016 Brazilian elections (A Janusz, 2021), ideological polarization in a democratic system (Dalton, 2021), party polarization and its effect on voter turnout (Muñoz & Meguid, 2021), voter fragmentation due to polarization of political parties as happened in the Netherlands (Harteveld, 2021), use and influence of mass media in German elections (Schmitt-Beck & Mackenrodt, 2010), use of social media in elections (Nulty et al.,

2016; Nai & Maier, 2020; Quinlan et al., 2015; Hendrawan et al., 2021) and patronage (Mechkova & Wilson, 2021).

Several bibliometric studies of journals have been carried out. Some of A's done about bibliometric analysis of the Journal of Network and Computer Applications (JNCA) for the 1997-2019 (Zurita et al., 2020), Twenty five years of the Journal of Travel & Tourism Marketing: a bibliometric ranking (Mulet-Forteza et al., 2018), Twenty-five years of the Information Systems Journal: A bibliometric and ontological overview (La Paz et al., 2020), Thirty Years of the Global Finance Journal: A Bibliometric Analysis (Baker et al., 2021). Then, Thirty years of the Journal of Business & Industrial Marketing: a bibliometric analysis (Valenzuela et al., 2017), Two decades of the Journal of Intellectual Capital: a bibliometric overview and an agenda for future research (Dabiæ et al., 2020), Twenty Years of the Journal of African Business: A Bibliometric Analysis (Kabongo, 2019), Top 100 most-cited papers in core dental public health journals: bibliometric analysis (Mattos et al., 2021), The Journal of Small Business Management: A bibliometric overview of 1996-2019 (Dana et al., 2021). From the several studies above, there has not been a single bibliometric study on the publication of electoral studies journals from 2016 to August 2021.

This article further aims to conduct a bibliometric analysis using the Vos Viewer and R studio applications from 2016 to August 2021 (dijelaskan kenapa 5 tahun terakhir). The contribution of this research lies in the reputation of the electoral studies journal, which has never been done before and can help understand election studies and their developments and problems. It is essential to understand the condition of world democracy which is currently considered the best power management system globally.

RESEARCH METHODS

The bibliometric method is understood as an approach to analyzing academic publications using statistical and mathematical methods (Mora et al., 2017; Li & Lei, 2021; Wang et al., 2021). This method uses a quantitative approach from the database bibliography (Naruethradhol & Gebsoombut, 2020; Gomezelj, 2016; La Paz et al., 2020; Merigo & Yang, 2017; Dabiæ et al., 2020; Dwekat et al., 2020; De Tre et al., 2014), to analyze the main areas of research, trending topics/themes that are developing in the Journal (Martínez-López et al., 2018; Jiang et al., 2019) and research fields. The bibliometric analysis focuses on examining themes, authors, citations, co-citations, methodology, and keyword occurrences (Kabongo, 2019; Koseoglu et al., 2016).

Moreover, bibliometrics can be used to describe the author's country of origin and the name of the Journal under study (Merigó et al., 2017), and overall can evaluate research publications on specific topics (Cobo et al., 2015). Bibliometric analysis can measure the relationship and influence between authors through articles written and their journals

through citation analysis (Gil-Barragan et al., 2020). Scholars use bibliometric methods to contact research or publication performance and plan the structure of the study focus. Bibliometrics can help researchers identify research trends, lead authors, major journals, and countries with the most publishing activity (Mattos et al., 2021). One of its main advantages is providing an overview that identifies the main trends in the bibliographic material under consideration (La Paz et al., 2020). Bibliometrics can be developed for a variety of purposes, including analysis of research by country (Bonilla et al., 2015) by the author (Martínez-López et al., 2018) and by institutions (Çakýr et al., 2015).

This research is sourced from the Scopus database of electoral studies journals with a Period 2016-August 2021. Scopus was chosen because it is a publisher with a high reputation who has a significant influence in developing research studies, one of which is the study of elections. The publication of the last 5 years is considered representative to see the trend of studies in electoral studies journals because it examines political and electoral phenomena that are happening and are the focus of many researchers in the world.

Articles are searched in several stages. First, The article was taken from the Journal electoral studies using a database from Scopus by limiting the time, namely 2016-2021. Because this data was taken in August 2021, the September and November 2021 publications are not used. Second, after the data was collected, as many as 618 articles originating from articles, proceedings, editorials, and regulations and made in the form of RIS and CSV, which were then analyzed using Vos viewer and R Studio.

Vos Viewer visualizes a bibliography or a data set containing bibliographic fields (title, author, author, and Journal) taken from co-occurrence keywords. Vos viewer retrieves data in RIS format from the Scopus database with 618 articles. R Studio is then used to analyze data in BibTex form based on author name, affiliation, abstract, keywords, references, document type, corresponding author. The main results were descriptive analysis, intellectual structure, and conceptual structure. The descriptive analysis describes the annual publication output and types of documents. It identifies the most contributing authors, institutions and countries. Finally, concept structure Identify various concepts often used in the Journal of Electoral Studies and divide them into classification and mapping studies.

RESULTS AND DISCUSSION

Publication and Country of Electoral Studies

Although consistently published every year, the Journal of electoral studies experiences fluctuating publication developments. From Figure 1, it can be seen that in the period 2016 to August 2021, the highest publication occurred in 2016 (24%). However, from

2016 to August 2021, there was a significant decline in the publication trend. This is not final considering that in 2021 the research data will stop in the August 2021 issue; there are still two volumes (October and December), so the publication of articles will likely increase.

Figure 1. Number of Publications per Year in Electoral Studies from 2016 - August 2021

Furthermore, for the form of documents from 2016 to August 2021, it can be seen that the majority (99%) are in the form of articles (figure 2). It means that electoral studies journals are more focused on publishing articles than conference papers, editorials, and erratum. This is the way for electoral studies journals to maintain and maintain the quality of publications considering that articles have better quality than others. Articles are considered better because they go through more stringent review procedures so that the quality of information and analysis produced is comprehensive. In addition, it also shows the high interest of the authors in writing articles.

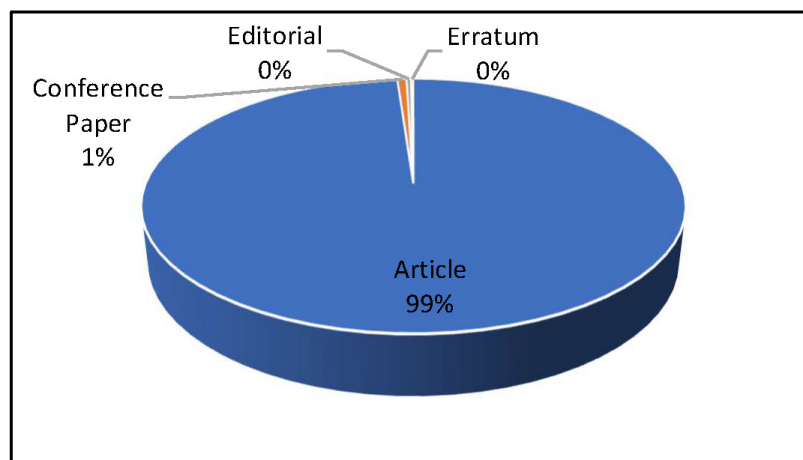

Figure 2. Type of Document in Electoral Studies, 2016 - August 2021

Leading Authors, Institutions, and Countries Represented in Electoral Studies

There are ten authors with the highest number of publications in the Journal Electoral Studies in 2016-August 2021. As shown in Figure 3, two authors have the same number, namely Blais a and Lewis-Beck, with five articles each. Blais wrote with the title more 'Europe,' less democracy? European integration does not erode satisfaction with democracy (April 2021), The European Union and political behavior: The shadow of the Great Recession (April 2021), Candidates and campaigns: How they alter election forecasts (April 2018), The British general election: Synthetic forecasts (March 2016) and Forecasting the 2015 British general election: The 1992 debacle all over again? (March 2016). Moreover, lewis beck with the title CSES 25th anniversary special issue: An introduction (February 2021), What is the cost of voting?) June 2019, voting and satisfaction with democracy in flexible-list PR (December 2018), What makes people believe their party won the election? (October 2018). Moreover, measuring the civic duty to vote: A proposal (March 2016). Furthermore, there are seven authors with four publications, namely Carreas, Fieldhouse, Gschwend, Harteverld, Lobo, Rekker, Zingher, and one author, Algara, with three publications.

Figure 3. The most Authors Contribution in Electoral Studies, 2016 - August 2021

Based on metadata from electoral studies journals, ten countries with the highest number of authors were mapped. From Figure 4, it can be seen that there are five countries with the most authors. The United States has the highest number of authors with 271 articles (44%). The United Kingdom followed them with 102 articles (17%), Germany with 54 articles (9%), Canada with 36 articles (6%), and the Netherlands with 35 articles (6%). The superior status of the United States further confirms its status as a country that excels in publications because one of them is the high cost of research. The United States makes research one of the pillars of its country’s progress to support significant funding.

Figure 4. Author’s Countries in Electoral Studies

Even though the United States is the country with the highest number of authors, in terms of universities, the origin of the most authors is the University from the Netherlands, namely Universiteit van Amsterdam with 21 publications (15%). They were followed by the University of Mannheim, Germany with 17 articles (12%), London School of Economics and Political Science, England with 17 articles (11%), Göteborgs Universitet Sweden with 15 articles (11%), and the University of Montreal Canada with 14 articles (10%). Furthermore, the University of the United States, namely Washington University in St. Louis, is ranked 7th with 12 articles (9%) The University of Essex is ranked 8th with 11 articles (8%), and the University of Houston is ranked 10th with 11 articles (8%).

Figure 5. Affiliation Contribution in Electoral Studies 2016 - August 2021

Main Research Cluster Analysis and Mapping Study

Cluster Study

Several primary and essential concepts from 2016 to August 2021 are often/ dominant used in electoral studies journals. Of the total 618 documents in articles, conference papers, editorials, and erratum analyzed using Vos Viewer; they will show the dominant concept, which is often discussed. The circle size indicates the number of publications related to the keyword, both in the Journal and the Journal abstract. The larger the circle size, the greater the number of articles relevant to that keyword. From Figure 6, it can be seen that the two most dominant or prominent words are voting behavior and election, which shows that these two words are most often discussed in electoral studies journals.

Table 1. Cluster and Items of Concept in Electoral studies 2016 - August 2021

Cluster	Concept Items	Number of Items (Color)
Cluster 1	Brazil, Compulsory Voting, Election, Election Campaign, Electoral Participation, Electoral System, Electoral Turnout, Field Experiment, Incumbency, Japan, Local Elections, Natural Experiment, Switzerland, Voter Turnout	14 (red)
Cluster 2	Belgium, Economic Voting, Europe, European Union, Financial Crisis, Gender, Germany, Party Competition, Populism, Radical Right, Satisfaction with Democracy, Spain, Voting Behavior	13 (Green)
Cluster 3	Direct Democracy, District Magnitude, Ethnicity, Ideology, Kenya, Participation, Party Identification, Political Knowledge, Referendum, Strategic Voting, Turnout, Vote Choice, Voting	13 (Dark Blue)
Cluster 4	Campaign, Candidates, Education, Elections, Experiment, Forecasting, Media, Party Leaders, Political Parties, Representation, Voters	11 (Yellow)
Cluster 5	Accountability, Clientelism, Electoral Accountability, Electoral System, Incumbency Advantage, Issue Voting, Party System, Polarization, Political Representation, Survey Experiment	10 (Purple)
Cluster 6	Democracy, Election Forecasting, Electoral Geography, Electoral Manipulation, Electoral Reform, Party Politics, Political System, Public Opinion, United Kingdom	9 (Sky Blue)
Cluster 7	Affective Polarization, Canada, Congressional Elections, Electoral Competition, Partisanship, Political Ideology, Voter Perceptions	7 (Orange)
Cluster 8	Latin America, Data Panel, Political Participation, Presidential Elections, United States, Voting Behavior	6 (Brown)

Source: Processed via VOSViewer, 2021

In cluster 1, the most dominant keyword is an election. Articles relevant to that keyword are articles written by (Heersink & Peterson, 2017) entitled Truman defeats Dewey: The effect of campaign visits on election outcomes, which shows that one of the keys to Truman's victory in defeating Dewey in Ohio was because of the extensive campaign

carried out. Although carried out in a short time, this strategy effectively influenced public opinion to increase support for Truman.

In addition, the dominant keyword in cluster 1 is voter turnout, so articles that are relevant to these keywords are articles written by Tavares & Raudla (2018) entitled "Size, density and small scale elections: A multi-level analysis of voter turnout in sub-municipal governments This study shows that his research of Portugal's sub-municipal governments (SMUs) proves a relationship between the total population density and the level of political participation. The higher the population density, the higher the level of political participation and vice versa.

In cluster 2, the dominant keyword is Europe. Articles that are relevant to that keyword are articles written by Janusz (2021) entitled "Electoral incentives and elite racial identification: Why Brazilian politicians change their race," which shows that more than a quarter of the political candidates who won Brazil's 2014 and 2016 elections used identity politics or racial sentiment.

In addition, the dominant keyword in cluster 2 is populism. Hence, articles related to these keywords are articles written by Schwörer (2021) entitled "Do not call me a populist! The meaning of populism for western European parties and politicians," Which shows that populism is used as a strategy to bring down political opponents as happened in Italy, France, Spain and Germany by the big parties. The difference is that in Italy and France, the strategy is considered reasonable so that it is perceived positively by parties that openly admit it, while in Spain and Germany, they tend to reject the perception that mentions the use of populism in attracting people's votes.

In cluster 3, the dominant keyword is turnout, so articles that are relevant to that keyword are articles written by Martinez i Coma (2016) entitled "Turnout determinants in democracies and non-democracies," Which shows that the level of political participation in democratic and non-democratic countries is highly dependent on the institutional and political designs adopted in those countries. In non-democratic regimes, political participation in elections tends to be high due to mobilization and coercion. In addition, articles that are relevant to these keywords are those written by Northmore-Ball (2016) entitled "Increasingly unequal turnout in Eastern European new democracies: Communist and transitional legacies versus new institutions," which shows the inequality of public political participation in the new democracies of Eastern Europe. In a country with a higher level of public education, political participation is also increased and vice versa.

In cluster 4, the dominant keyword is elections. The relevant article is an article written by Algara & Hale, (2020) entitled “Racial attitudes & political cross-pressures in nationalized learning mechanism the Republican coalition in the Trump era”, Which shows that one of the keys to the victory of Donald Trump and the Republican Party in the 2016 United States Presidential Election is to maximize the support of the white race. This is in line with Trump’s leadership orientation which emphasizes white supremacy, considered the main class in the United States.

In cluster 5, the dominant keyword is the electoral system. Articles relevant to these keywords are written by Han & Chang, (2016) entitled “Economic inequality, winner-loser gap, and satisfaction with democracy.” The study using multilevel analysis of the Comparative Study Electoral Systems (CSES) data shows a gap in democratic satisfaction for winners and losers in elections. The widening economic inequality makes the losers feel dissatisfied with democracy while, on the contrary, the winners feel satisfaction with democracy.

In cluster 6, the dominant keyword is democracy. Articles that are relevant to that keyword are articles written by Lundmark et al. (2020) entitled “Confidence in an election authority and satisfaction with democracy: Evidence from a quasi-natural experiment of a failed election in Sweden. This study shows that using the case of the 2010 Sweden regional election, which had to be repeated because of procedural errors in voting, it resulted in a decline in public trust. This is also coupled with the condition of regional and national elections, which are also considered less democratic.

In cluster 7, the dominant keyword is partisanship, so articles relevant to these keywords are written by Kang et al. (2021) entitled “Candidate sex, partisanship and the electoral context in Australia”. This study shows that from a probability-based sample of Australian voters, female respondents who identify with the left tend to prefer female candidates regardless of the candidate’s partisan affiliation and electoral context. In contrast, male voters who identify with the right prefer male over female candidates in intra-party contests between right-affiliated candidates. The study also shows that conservative men are the least supportive of female candidates. Because conservative men dominate Australia’s current government parties, the progress of women politicians is hampered.”

In addition, articles that are relevant to these keywords are articles written by Aidt & Rauh, (2018) entitled “The Big Five personality traits and partisanship in England,” which in Which shows that supporters of major parties (Labour, Conservative and Liberal Democrats) have substantially different personality traits.

In cluster 8, the dominant keyword is voting behavior. Then the relevant article is an article written by Bowler et al. (2018) entitled “Voter preferences and party loyalty under

cumulative voting: Political behavior after electoral reform in Bremen and Hamburg,” Which shows that by taking a study in Bremen and Hamburg, it was found that voters actually have a wider political preference than the number of candidate choices provided. This shows that there are many candidates the voters do not fully support or that several candidates are supported by the voters but are not available in the ballot box.

Mapping Study

Furthermore, the 8 clusters above are fragmented into 3 clusters to show the network that appears the most. As shown in Figure 7, three essential clusters were found from the R Studio analysis, all of which were related to other themes. This clustering is conceptually the most significant cluster that offers the most dominant and is related to different topics. Meanwhile, clusters related to survey data are closely related to vote choice and voting behavior data because the documents' context is related to voter tendencies. Voter Turnout is related to political participation, election participation, and elections in the other cluster. Meanwhile, electoral systems are related to political parties, party systems, and electoral systems and representations.

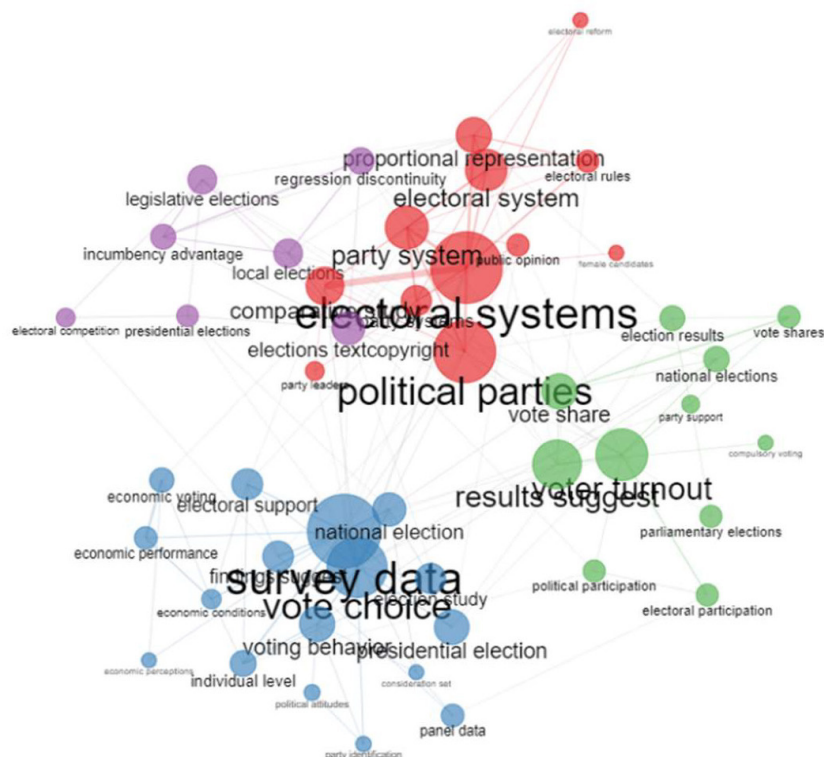

Figure 7. Co-occurrence Network of Electoral Studies using R Studio

From the bibliometric analysis conducted, 2 keywords often appear as evidence of the main focus of many researchers in the Electoral Studies Journal. These 2 keywords are most often discussed because they are indeed a very frequently researched topic. First, voting behavior. This topic is always interesting for many authors because it explains the voting behavior of people who are always dynamic. Globalization and changes in social, political, and economic conditions in a country certainly greatly affect voting behavior so voting behavior trends are always actual to be researched. This is also increasingly interesting amid the presence of populism and identity politics that greatly affect people's voting attitudes as happened in the United States, Indonesia, Britain, the Netherlands, France, Germany, Brazil, and several other European countries. Voting behavior is also one of the main keys to seeing the electability of a candidate.

Second, elections. This topic is also very interesting because the electoral studies journal is the main topic related to elections so it is very often researched by the author. In the world, there are 195 countries with more than 80% holding elections so the phenomena related to elections are certainly very many and complex. In elections, many aspects are studied ranging from institutions, candidacy, and public participation to conflicts that occur.

The two keywords above imply that voting behavior and elections are topics that are always interesting to be studied. Further studies in electoral studies remain relevant by linking to these 2 keywords. These 2 keywords are topics that can be researched with a variety of approaches so that they can continue to contribute to electoral studies.

CONCLUSIONS

Since it was first published in 1982, electoral studies have continued to develop into a journal of high international reputation and are currently one of the primary references for understanding the phenomenon of elections in the world. This article conducts a bibliometric study of electoral studies journals in the period 2016-August 2021. It is found that the United States is the country with the highest number of authors, and Universiteit van Amsterdam is the origin of most universities. Voting behavior and elections are two important keywords that appear frequently, indicating that these two issues are most frequently discussed by the authors. The implication of this study is that it provides researchers and academics with clues about topical trends and topics that are rarely discussed in research on electoral topics that will be published in electoral studies journals and other reputable international journals.

However, this study also has some limitations. First, it is only limited to one journal while there are also highly reputable international journals with a focus on electoral issues, so future studies need to combine these journals to analyze scientific literature more comprehensively and deeply. Second, the data mining method is only looking at

the discovery of bibliometric words in the title, abstract, and keywords in Scopus. More in-depth data mining or meta-analysis on full articles will provide more comprehensive discussion results. Third, the analysis is less comprehensive and in-depth on one issue/topic because bibliometric studies are only mapping. Future studies can further analyze important topics that appear in more depth on one political event in a democratic country. For example, the two dominant keywords that emerge, namely voting behavior and elections, can be related to the Indonesian context to see the tendency of young voters' attitudes toward the threat of hoaxes and post-truth or to see the phenomenon of simultaneous elections and simultaneous regional elections in 2024, which of course will have complexities that are very interesting to study.
